Products

Legerair / FLAT DESIGN PANEL / Neorock Photocatalytic Ceramic Coating /
Filltect Photocatalytic Ceramic Coating / Excellage Photocatalytic Ceramic Coating

Decomposition Power

Dirt is decomposed by the sun (Ultraviolet Rays), weakening adhesion.

Air-purifying Function

Photocatalytic coat decomposes pollutants in the air and exhaust gas (NOx and SOx) into clean air .

The air purification capability of Photocatalytic coat of 165m² is worth 12 poplars.

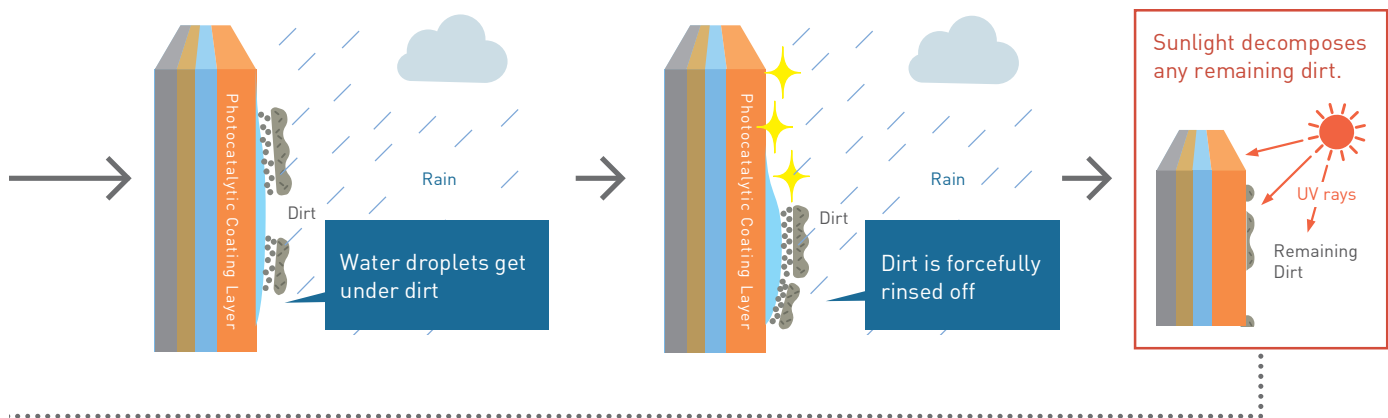

*Assuming a poplar tree's air purifying capability (NO2) is 0.57g / day

Compatibility with water allows for easy cleaning.

Super Hydrophilic Property

Due to the extreme compatibility with water, rainwater rinses off dirt.

The ceramic coating layer offers strong protection against fading and sunburning

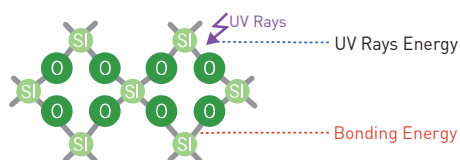

Super Weather Resistance

The double effects of the inorganic resin and the inorganic UV absorber protects against over time and cuts UV rays.

Point 1: Inorganic resin

The main framework is 100% inorganic with bonds that are strengthened by UV energy to prevent deterioration over time.

■ Molecular structure diagram

Bonds are not easily broken

Molecular Bonds

413 KJ / mol
Kilo joules per mole

443 KJ / mol

Increased strength from UV energy to prevent bonds from being easily broken

Point 2: Inorganic UV absorber

The inorganic construction helps prevent deterioration and is able to cut UV rays.

Products

Neorock Hydrophilic coating / Excellage Hydrophilic coating
Filltect Hydrophilic coating / Ceradir Hydrophilic coating

Compatibility with water allows for easy cleaning.

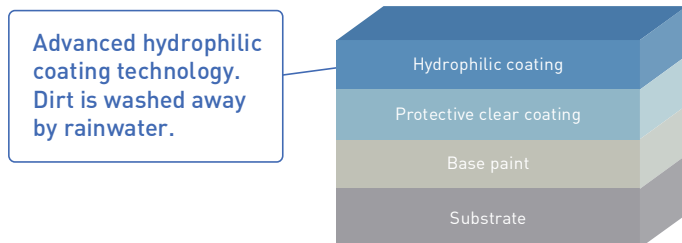

Washed away by rainwater. Water gets on the dirt and washes the dirt away

Advanced hydrophilic coating technology helps wash away dirt accumulated on the panel with rainwater. After panel being cleaned with rainwater from dirt, moisture remains on the hydrophilic surface. The color coating is strongly protected from moisture.

Hydrophilic

The panel structure is formed from the substrate, base paint protective clear coating and hydrophilic coating.
